Centerville News

Green Waste Disposal

To comply with the EPA's Clean Water Act and Utah State water regulations, Centerville City is modifying the way it offers free green waste disposal to residents. In the past, Centerville contracted for a curbside bulk green waste pickup in the Spring. The curbside program affected storm water quality in violation of Federal and State Law. Therefore, the City is eliminating the bulk green waste curbside program. The City realizes this has been a very popular service and many will be disappointed. Because many residents rely on this convenient service, the City will offer an alternative this year that is compliant with storm water regulations.

On April 7 and 14 (two Saturdays), from 8 a.m. to 4 p.m., residents may bring their green waste to one of two designated locations, identified below. Green waste includes tree limbs, branches, and yard clippings (not grass clippings). Employees and volunteers will be there to assist with traffic and maintenance of the site. Employees **WILL NOT** be using equipment to unload trucks or trailers, as this is the responsibility of the residents.

Locations

Lower Smoot Park – approx. 1500 North 200 West

Using the lower parking lot allows material to be stored away from more frequently used parking areas. Parkway Drive (200 west) will be limited to one-way traffic on the days of the cleanup. This will allow for faster, safer transitions for residents bringing material. In the event of larger than anticipated quantities, this road would be closed for the duration of the cleanup to accommodate more storage. This will be the primary dump site.

Lower Island View Park—approx. 450 South 700

The lower parking area of Island View Park runs adjacent to 700 East, directly east of the cemetery. This is ideal for those with smaller loads due to its smaller capacity. Those with larger quantities may be directed to Smoot Park. 700 East will be narrowed to one-way access during drop off times which will allow employees and volunteers to work safely.

We encourage residents to coordinate efforts with their neighbors. This situation will create a hardship for many who do not have access to a truck or trailer. It is a great opportunity to get to know and help your neighbors, share some work and equipment, and to improve our community. If you have a trailer or truck, consider checking with neighbors to see who needs help.

The City Newsletter later in March will include designated routes, for better traffic control at these locations. Please note, both locations will be fenced and monitored, and dumping times will be restricted to the days and times mentioned above. This is necessary to discourage inappropriate or illegal dumping, which has occurred at common collection sites in the past. Any caught leaving materials illegally will be subject to possible penalties, including fines. In accordance with law, loads should be secured to prevent debris on the streets.

Questions about Green Waste Disposal? Contact Centerville City's Drainage Utility Supervisor, at 801-292-8232. Watch for additional information and updates on the city website: WWW.CENTERVILLEUT.NET

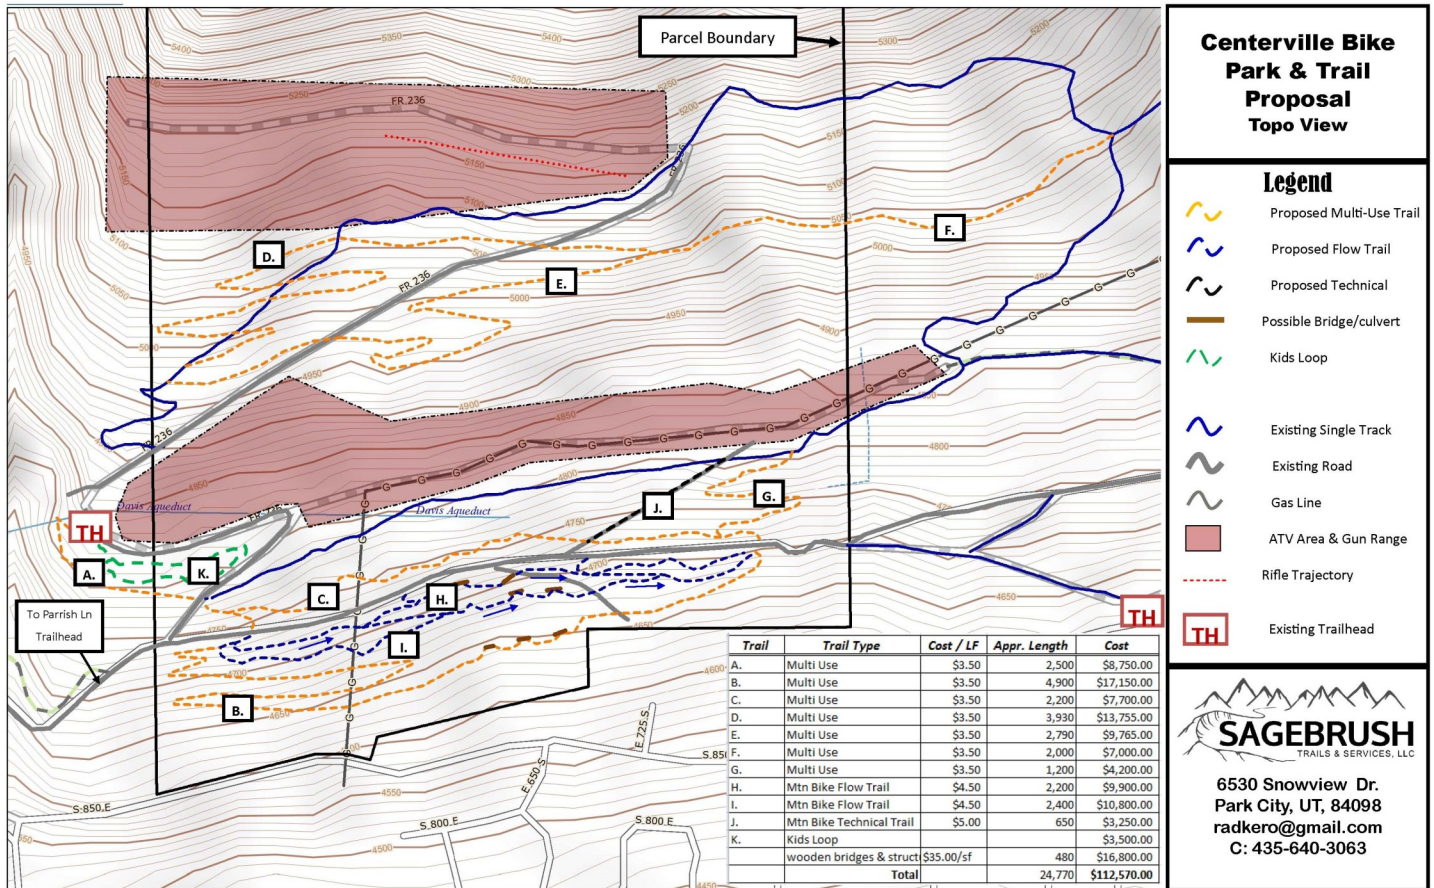

Public Open House—Proposed Mountain Bike and Hiking Trails

Tuesday, March 13, 6:00 to 8:00 p.m.

Centerville City Hall

The Centerville City Council and Trails Committee are hosting an open house to receive public comment about the Committee's proposal to use City-owned property to develop a system of trails for mountain bikers and other trail users. The City Council has met in work session with the Trails Committee to better understand their proposal, and now would like to know the community's reaction. At the open house you will be able to ask questions, express your opinion or concerns, and leave your written comments for the Trails Committee and City Council to consider.

The proposal includes several miles of multi-use trails (non-motorized), and also incorporates a section of mountain bike flow trail, mountain bike technical trail and a kids bike loop. The trails would tie into existing trails on the mountainside, including the Bonneville Shoreline Trail. Access to these trails would be via the Parrish Lane Trailhead, Twin Hollow Park (also known as "Cheese Park" in Bountiful), and the Deuel Creek South Trailhead at the north end of the ATV riding area.

Call for Feedback about Wasatch Choice 2050 Vision

The Wasatch Front Regional Council (WFRC), in close collaboration with the Utah Department of Transportation and the Utah Transit Authority, invites you to provide feedback regarding the Wasatch Choice 2050 (WC2050), a vision for the future of our region. Find out what the Draft Vision does for transportation, the economy, our air quality, and other important topics. Learn more and provide feedback, now through March 16, at <https://arccg.is/yr9C5>
